Recent Research in RF Health Effects in China

- Review of RF research in China
- Focus on NIEHS RF research

Recent RF research in China

RF frequency	Type of study	Papers	PY
HPM/EMP	Animal	15	2001-2004
*	In vitro		
1800MHz	Animal (memory)	1	2003
900MHz*	Epidemiological Animal, In vitro	10	1999-2004
170MHz	Epidemiological (WHO-NCTB)	3	2000-2002
30MHz	Animal (neurobehavior)	1	2004
Total		30	

Recent Research in HPM/EMP Biological Effects in China (2000-2004)

Recent Research in HPM/EMP Biological Effects in China (2000-2004)

Frequency	Type of study	Effects	Results	Papers	PY
4-20GHz	Animal	Myocardial enzyme	Decreased	1	2004
	Animal	Astrocytes*	Increased (AD)	1	2004
	Animal	Lens epithelial cells	Cataract	1	2004
	Animal	Liver	Pathological change	1	2004
	Animal	Memory learning	Maze, LTP	1	2001
	Animal	BBB*	Permeability	3	2003
	Animal	Mutation	c-sis	1	2001
	Animal		DNA ploidy	1	2004-
	In Vitro		Hela-cells	1	2002
	Animal	Neurotransmitter	CA	1	2001
	Animal	Apoptosis*	NIH/3T3 cell	1	2001
	In Vitro		Neurons	1	2002
	Animal		Hematopoietic cell	1	2003
Total					15

HPM/EMP Effects: Astrocytes & AD (2004)

- **Unit:**
**Institute of Radioactive Medicine, Academy
of Military Medical Science of Chinese PLA**
- **Source of the project:**
the National Science Foundation of China
- **Aim of the project:**
EMP effects on astrocytes and AD
- **Subjects of the study:**
Kuming mice, 2-month old

HPM/EMP Effects-Astrocytes & AD

Exposure Conditions

Square wave, 9.0GHz, 0.25μs, 0.067%
12.89W/cm²(Peak), 8.1W/cm²(Avrg)
2.4W/kg (WBA)

Only one exposure for 20min
GTEM

HPM/EMP Effects-Astrocytes & AD

- **Sensitive cerebral area:**
hippocampus, corpus callosum, nucleus amygdalae
- **Biological effects:**
GFAP positive astrocytes increase;
Astrocytes as satellite to neurons increase;
Hypertrophic astrocytes with long processes increase;
***Astrocytes group in clusters with the processes oriented similarly (senile plaques)**
- **Conclusion:**
Delayed effects on CNS, AD

HPM/EMP Effects on BBB (2003)

- **Unit**
The fourth military medical university
- **Source of the projects**
Military ‘Tenth Five Year Directive’ Program of Medicine and Hygiene
- **Aim of the projects**
EMP effects on BBB
- **Subjects of the projects**
SD rats with $200\pm20g$

HPM/EMP Effects on BBB (2003)

■ Exposure conditions

GTEM

**25, 50, 100, 200, 400kV/m,
25, 50, 100, 200 pulse,
20s**

HPM/EMP Effects on BBB (2003)

- **Method**
EB intravenous injection
- **Results**
EB formed fluorescent faculae in brain where BBB permeability had changed
- **Sensitive brain area**
cerebral cortex, thalamus, hypothalamus, cerebellum, caudate putamen and medulla oblongata
- **Conclusion**
BBB permeability changed with more pulses and higher potentials
- **Recovery**
**BBB permeability can be recovered to normal
200kV/m, 200pulses, 6h**
- **Further explore**
12/23/04

HPM/EMP Effects on apoptosis (2001-2003)

EMP Effects on Apoptosis (2001-2003)

EMP Dose	Subjects	Apoptosis	Source of projects	PY
6× 10 ⁴ V/m, 2.5pulse/min, 2min 20ns (rise), 30us (width)	NIH/3 T3 cell	6h (peak)	Military (9th)	2001
6× 10 ⁴ V/m, 2.5pulse/min, 2min 20ns (rise), 30us (width)	Cerebral cortical *neurons			
6× 10 ⁴ V/m, 6pulse/min, 5min 20ns (rise), 30ms (width)	Wistar rat Hematopoietic cell marrow Macaque	12h (peak) Apoptosis:7-14d Recovery:28d-3m	Military (9th)	2002

	Noise		-0.5305	0.2119	1.70	<0.05

Focus on NIEHS, China CDC: Epidemiological Studies-Depression

Stepwise regression analysis of depression scores

Impacting factor	β	SE	P
Constant item	6.5575	1,8962	<0.01
Irregular sleeping patterns	4.0728	1.4006	<0.01
Sex	-3.8174	1.4150	<0.01
Use of cellular phone	-2.5760	1.1580	<0.05
Workplace stress	1.5214	0.5843	<0.01
Relations with colleagues	2.4441	0.8869	<0.01
Unexpected incidents	1.4633	0.8046	<0.05
Smoking	3.1256	1.2391	<0.05

Focus on NIEHS, China CDC: Epidemiological Studies- Covariance analysis and stepwise regression analysis

- The scores for depression for the user group and control group by covariance analysis were 13.17 and 15.75 respectively. There was a statistically significant difference between the two groups ($p<0.05$).
- There was a negative correlation with use of cellular telephone handsets.

Focus on NIEHS, China CDC: Epidemiological Studies-Summary

- Long-term use of mobile phone may increase the abnormal rate of chest distress, nausea, bad appetite and other symptoms of neurasthenia
- Mobile phone use may have adverse effect on quality of sleep and could result in insomnia
 - Extended use of mobile phone in the daytime could result in dream often at night

Summary-continued

- **Mobile phone use might cause adverse health effect on neurobehavior**
- **No adverse health effect on depression was found due to successful feeling for mobile phone use**
- **No significant change was found in the morbidity of diseases due to mobile phone use.**
